Death by PowerPoint: **Not the Way to Learn Coding**

A close-up photograph of a person's hands typing on a silver laptop keyboard. The laptop screen displays a code editor with CSS code. A yellow arrow points from the text 'True Way to Learn Coding' to the code on the screen. The code includes various CSS properties like font-size, margin, border, and transition. The background is slightly blurred, showing a desk and some papers.

True Way to Learn Coding

```

    font-size: 10px; margin-left: 3px; border-radius: 5px !important;
    background: #fff !important;
    border-top-color: #fff !important;
    border-bottom-color: #fff !important;
    border-left-color: #fff !important;
    border-right-color: #fff !important;
    border: 1px solid #ccc !important;
    transition: all 0.5s ease-out 0s;
    user-select: none;
    -moz-user-select: none;
    -o-user-select: none;
    user-select: none;
  }

  .user_language {
    width: 50px;
  }

```

jQuery \$(Begins)

A close-up photograph of a person's hands typing on a silver laptop keyboard. The laptop screen displays a code editor with CSS code. A yellow arrow-shaped banner is overlaid on the top left of the image, containing the text 'True Way to Learn Coding'. The background is slightly blurred, showing a desk and some papers. The overall lighting is warm and focused on the hands and keyboard.

True Way to Learn Coding

Be prepared to have classes that are increasingly “**just code.**”

(You will appreciate it in the long run.)

Today's Class

Agenda

In today's class we'll be covering:

DOM manipulation using plain JavaScript

DOM manipulation using jQuery

Responding to click events

DOM Manipulation

Understanding the DOM

Basic Example: todomvc.com

Every HTML page begins as static content.

However, with Javascript/jQuery, we can **modify the DOM** and change this static content in real time.

This allows us to build dynamic sites.

Activity:

Generating HTML with Plain JavaScript

Suggested Time:
15 minutes

Activity: Generating HTML with Plain JavaScript

Using the file sent to you as a starting point, add the missing code so that your JavaScript generates HTML content that displays all drink options.

Hint: You will need a for loop. Inside the for loop, you will need to use each of the following methods: `createElement`, `innerHTML`, and `appendChild`.

Suggested Time: 15 minutes

Intro to jQuery

Intro to jQuery

jquery.com

jQuery is a cross-platform **JavaScript library** designed to simplify client-side HTML scripting.

Query Helper Library

jQuery can be useful for tasks such as:

Dynamically inserting, updating, or removing HTML

Registering click or other change events

Animating HTML elements

Downloading data from databases

And much more!

Working with jQuery

01

Include a CDN (Content Delivery Network) link to the jQuery script.

```
<!-- Added Link to the jQuery Library -->  
<script src="https://code.jquery.com/jquery-2.2.3.js" integrity="sha256-  
laXWtGydpwqJ8JA+X9x2miwmaiKhn8tVmOVEigRNtP4=" crossorigin="anonymous"></script>
```

02

Utilize the jQuery specific (\$) selector.

```
$("#clickMe")
```

03

Apply jQuery methods on the selected elements.

```
$("#clickMe").on("click", function(){  
  
    // Trigger an alert.  
    alert("I've been clicked!");  
})
```

Instructor Demonstration

DOM Manipulation with jQuery

Activity:

Generating HTML with jQuery

Suggested Time:
15 minutes

Activity: Generating HTML with jQuery

Refactor (rewrite) your previous `drinkList` code from earlier, but this time use jQuery to complete all of the same tasks.

Your final code should NOT have any of the following methods: `createElement`, `innerHTML`, or `appendChild`.

Hint: Don't forget to "incorporate" jQuery before you begin.

Bonus: Instead of using a for loop, look up how to use the jQuery `.each` method.

Suggested Time: 15 minutes

Instructor Demonstration

On-Click Basic

Partner Activity: Sandwich Clicking

Suggested Time:
20 minutes

Partner Activity: Sandwich Clicking

Add the missing code so that clicking any of the sandwiches causes:

An alert message that says something snarky about the sandwich type.

An alert message that displays how many of a specific sandwich the user has eaten.

Hint: You will need counter variables.

Bonus: Add an image to the `image-div` on the click event.

Suggested Time: 20 minutes

Partner Activity: Trigger Random

Suggested Time:
12 minutes

Partner Activity: Trigger Random

Add the missing code so that clicking the big blue button triggers a random number (between 1 and 1,000) to be selected and prominently displayed in the `randomNumber` div.

Suggested Time: 12 minutes

Partner Activity: Lottery Generator

Suggested Time:
20 minutes

Partner Activity: Lottery Generator

Use the code from the previous random number generator to create a lottery generator.

The lottery generator should select 9 random numbers (and always 9 numbers).
Example: 886563264

Display this number in the `randomNumber` div.

When the user clicks again, create a new row with the most recent number at the top.

Suggested Time: 20 minutes

Challenge:

Number Checker

Suggested Time:
20 minutes

Challenge: Number Checker

Based on the demonstration, create an application in which:

A computer selects a random number between 1 and 4.

The user clicks buttons numbered 1 to 4.

If the user's number matches the computer's number, display text informing them of this in the Result panel. Otherwise, display text informing them that they lost.

Bonus: If you finish early, try to improve the aesthetics of your app.

Suggested Time: 20 minutes
